

ArcDrive

Helping teams to work with the right work file and accurate data. Real-time synchronization of data

Upload & Share

Create folders. Upload Files. Save on Cloud—Collaboration made easy! Help your team organize files and secure them on the cloud. Team members working on file-heavy projects can use shared folders to achieve seamless coordination by sharing files, adding notes, making edits, etc. Simultaneous working made possible.

Security & Access

Grant role-based access at a granular level. Password-protect the share links, set expiration date, and determine the set of actions that a user can perform on a document—view, download, share, edit, etc. Explore the audit log to determine who has viewed your document, etc. Get complete control over what you share.

Document Storage and Retrieval

Limitless storage capacity. Complete encryption of the data.

Store files of any size and extend the space additionally if required. Version every file or document to eliminate duplication, accidental deletes, or unnecessary edits for easy retrieval.

Integration & Collaboration

Give exclusive space for teams to collaborate through shared folders. Set up groups, upload all relevant files specific to team functions, and give access to team members to collaborate meaningfully. ArcDrive can be integrated with e-signature, workflow, and document management applications.
